Mumbai, India | 98678 93889 | narottamaswalwork@gmail.com | [linkedin.com/in/narottamaswal](https://www.linkedin.com/in/narottamaswal) | github.com/narottamaswal | [Portfolio](#)

SUMMARY

Full-stack Software Engineer with **4+** years designing and delivering scalable distributed systems in **Java** (Spring Boot), **Microservices**, and Angular, across banking, fintech and insurance. Experienced in event streaming design, security, CI/CD, and cloud-native AWS deployments. Strong focus on system performance, data **governance**, and cross-functional delivery.

EXPERIENCE

Software Engineer | ISS Stoxx (Deutsche Boerse Group)

July 2024 - Present

- Architected Spring Boot microservices using **Spring Cloud** Config Server, Eureka, API Gateway, and Resilience4j, leading Agile delivery with Angular across auth, security, and performance, enabling reliable consumption by **3** teams.
- Reduced Angular report load time from 15–25s to ~8s via parallelized API calls, response caching and asset preloading.
- Containerized and **orchestrated** microservices with Docker images onto an existing Mesos **Kubernetes** cluster, eliminating legacy Jenkins pipeline, Linux deployments and RPM building, accelerating delivery velocity by **~45%**.
- Contributed to shared UI component library with 15+ reusable Angular widgets (pipes, directives, form controls), eliminating ~40% boilerplate code and accelerating cross-team feature delivery by 30% across sprint cycles.
- Leveraged **Hazelcast** for caching of frequently served D3 charts, cutting API call volume and response time by ~50%.
- Introduced Spring Batch ingestion pipeline with **parallel** chunk-based execution, accelerating throughput by ~30%.
- Cut query latency by ~30% by refactoring SQL Server stored procedures and functions to **optimize** efficiency.
- Secured 15+ endpoints against session hijacking using Spring @PreAuthorize and SpEL-driven custom validations.

Software Engineer | PayNearby

January 2022 - June 2024

- Built a transactional messaging platform across 7 microservices processing **~100K+** daily messages - communication backbone for all internal services with **Apache Kafka**-based async decoupling, vendor failover and delivery tracking.
- Spearheaded a transaction reconciliation app integrating **Yes Bank** and insurance vendor APIs, processing 5K+ records nightly with fault-tolerant retry/skip logic, ensuring reliable **reconciliation** for ~30K+ daily active users.
- Created RBAC angular route guards and JWT auto-refresh interceptors to secure 10+ role-sensitive Angular endpoints.
- Trimmed **AWS** infrastructure costs by migrating low-request DynamoDB workloads to PostgreSQL and **eliminating** EBS usage via microservices decoupling, cutting spend by **~25%** while improving deployment frequency by 60%.
- **Optimized** SQL/JPA/Hibernate queries, cutting database load by 20% and improving high-throughput response times.
- Developed fault-tolerant SMS gateway with circuit breakers, mitigating failures and vendor switching barriers by **~30%**.
- Reduced inter-service latency and processing overhead by ~40% by replacing legacy REST/JSON protocols with gRPC.

TECHNICAL SKILLS

- **Languages:** Java, C++, Typescript
- **Frameworks & Libraries:** Spring Boot, Spring Cloud, Spring Security, Angular, Node.js, Django, Hibernate, JPA, Tailwind
- **Databases:** PostgreSQL, SQL Server, MongoDB, DynamoDB, Redis
- **Architectures & Platforms:** REST API Design, Microservices, gRPC, JWT, MVC, Linux, Kubernetes, Apache Kafka
- **Cloud & Developer Tools:** Git, Gradle, Nginx, Jenkins, Docker, AWS, Minikube, CI/CD, Claude, Copilot, Junit, Swagger

PROJECTS

Hush App | github.com/narottamaswal/hush-app | hush-app.onrender.com

March 2026 - May 2026

- A note-sharing app with SHA-256 hashed content, one-time-view links, and Google **OAuth2** login with custom filters.
- Implemented a robust validation layer with chain of **responsibilities** pattern by creating independently testable steps.
- Added custom note-expiry via **Redis** TTL and keyspace notifications, triggering cleanup, cutting stale data by ~30%.

EDUCATION

Master of Computer Applications (M.C.A)

October 2020 - June 2022

Vivekanand Education Society's Institute of Technology

CGPA: 9.8

ACCOMPLISHMENTS

- Solved 450+ problem-solving questions based on data structures and **algorithms** on Leetcode and Coding Studio.
- Recognised with multiple **performance** awards across roles for strong technical leadership and application ownership.
