Summary

Full-stack software engineer with **4+** years designing and delivering scalable distributed systems in Java (**Spring Boot**), Microservices and Angular, across **Fintech** and SaaS. Experienced in event streaming design, security, CI/CD, and cloud-native **AWS** deployments. Strong focus on system **performance**, security hardening, and cross-functional delivery.

Work Experience

Software Engineer

July 2024 – Present

ISS Stoxx (Deutsche Boerse Group)

Mumbai, India

- **Led** cross-functional teams delivering **Spring Boot** microservices and Angular apps across auth, security and performance domains using spring cloud modules, with end-to-end ownership and implementing **Agile** and TDD.
- **Reduced** automated report generation time by **60%** via parallelised API calls, response caching and asset preloading.
- Containerized and **orchestrated** microservices using Docker onto an existing Mesos **Kubernetes** cluster, eliminating legacy Jenkins pipeline, linux deployments and RPM building, accelerating delivery velocity by 45%.
- Used **Hazelcast** for caching of frequently served D3 charts, minimising API calls and cutting response time by 50%.
- Created Spring Batch ingestion pipeline with multi-threaded **TaskExecutors** in 50-row chunks, boosting throughput.
- Resolved **pentest-flagged** vulnerabilities via Spring **@PreAuthorize**, securing endpoints against session hijacking.
- Implemented a **CI/CD pipeline** for Angular library publishing with custom versioning and automated changelogs, eliminating unauthorized local publishes and ensuring **centralized, auditable** npm releases.
- **Empowered** team through collaborative code **reviews** and technical mentorship, fostering engineering best practices.

Software Engineer

January 2022 – June 2024

PayNearby

Mumbai, India

- Built a transactional messaging platform across 5 microservices processing 100K+ daily messages - unified communication backbone for all internal services with Apache Kafka-based **async** decoupling, vendor **failover**, and delivery tracking.
- Built and **delivered** multiple applications integrating **Yes Bank** and insurance vendors APIs serving 30K+ daily active users in a global financial data platform, reducing average API response time by 35% and owning full delivery lifecycle.
- **Migrated** monolith Jersey apps to Spring Boot microservices, increasing speed by 30% and eliminating AWS EBS cost
- Designed core **MySQL** schema with relational models, indexing and query optimizations as foundation for other apps
- Rebuilt transaction **reconciliation** service, processing 5K+ records nightly with fault-tolerant retry and skip policies.
- Created fault-tolerant SMS gateway with **circuit breakers**, mitigating failures and vendor switching barriers by 30%.
- **Authored** client-facing technical specification docs, **RCA** reports, and custom query runbooks adopted across teams.

Technical Skills

Languages: Java, C++, Python

Frameworks/ Libraries: Spring Boot, Spring Cloud, Spring Security, Angular, Django, Hibernate, JPA

Cloud/ Developer Tools: Git, Gradle, Nginx, Jenkins, Docker, AWS, Minikube, CI/CD

Database: PostgreSQL, SQL Server, MongoDB, DynamoDB, Redis

Architectures/ Platforms: REST API Design, Microservices, JWT, MVC,, Linux, Kubernetes, Apache Kafka

Projects

Hush App | *Angular, Spring, SQL* | [Code](#) | [Live](#)

2025

- A note-sharing app with **SHA-256** hashed content, one-time-view links, and Google OAuth2 login with custom filters.
- Created a robust validation layer with **chain of responsibilities** pattern by creating independently testable steps.
- Added custom **note-expiry** via Redis TTL and keyspace notifications, triggering cleanup, cutting stale data by 30%.

SafeMedia.ai | *React Native, Django, Firebase* | [App](#) | [Code](#)

2022

- Created a cross-platform social **app** providing full crud features and ML models integration to detect duplicate profiles.
- Developed and consumed Django APIs integrating **firestore** for real-time data and blob storage for media uploads.

Education

Master of Computer Applications (M.C.A)

October 2020 – June 2022

University of Mumbai (Maharashtra, India)

CGPA- 9.8

Accomplishments

- Solved **450+** problem solving questions based on data structures and algorithms on **Leetcode** and Coding Studio.
- Recognised with multiple **performance** awards across roles for strong technical leadership and application **ownership**.
